The camera length that is, the distance between the specimen and the detector was measured directly and found to be Although here we have used a conventional round magnetic lens to form the illumination at the object plane, there are undoubtedly much better ways to configure and optimize a ptychographic microscope.

The general expression of the output $u(x, y)$ of a nonlinear mean filter is where ϵ is a small positive number, F is a function of u and ∇u , p is a probability density function, U is supposed to be uniform and affected by estimation of the gray value of U , noise having a certain distribution.
