In conclusion, the factors that produced the pattern I searched were a change in the predation-mortality function combined with restrictions on hoarding. Abstract In winter, small birds should be fat to avoid starvation and lean and agile to escape predators. Nor is the magnetic compass a reliable fallback .

The young of many bird species do not precisely fit into either the precocial or the altricial category. Within a species not all populations may be migratory; this is known as "partial migration". The timing of this moult – usually once a year but sometimes twice – varies with some species moulting prior to moving to their winter grounds and others molting prior to returning to their breeding grounds. Proceedings of the Royal Society B. The birds winter on the Patagonian Shelf and in estuaries in Argentina, and one species, the common poorwill even enters a state of hibernation. Otidiformes bustards.
