Interactive links are spread through each unit providing an alternative method of exploration and learning. Networks of brain-eye interactions during different physiologic states. Acneisoneofthemostcommonskincomplaints. As a child, my innate curiosity was fed by reading books that explained the mysteries of the human body such as why we sneeze, or why our hairs stand when we are cold. To better understand how organ-organ interactions are influenced by the relative contribution to links strength from different frequency bands and different brain areas as represented by the shape of radar-chart in the organ hexagonwe scale all organ hexagons to

standard size and assign colors to organ nodes and organ hexagons according to the dominant brain frequency bands mediating the interaction Section Results: Organ-Organ Networks. Page 39 Share Cite.

Each node in the heptagon is assigned a color and represents a specific physiological function. It is not uncommon that cultural and ethnic information is missing in a textbook at this level. By however, as many as 25 percent of adults still had serum total cholesterol levels that exceeded recommended levels.
